Foreword

THE American people, since Pearl Harbor, have seen many changes in their ways of living. While the men and women in the services of our country are sacrificing so much in the theatres of war, we, on the home front, are backing the attack with the purchase of War Bonds and Stamps and with increased production in industry and agriculture.

The nursery industry, busy with the growing of vegetables, fruit trees, herbs for medicinal and cooking purposes, and other nursery stock for camouflaging military objectives, plays a more important part in this war than is generally realized.

During the thirty-five years of service to the American gardeners, we have earned a reputation for quality with service. Despite such serious handicaps as shortage of help and trucking problems, we will endeavor, with your cooperation and patience, to maintain our usual standards.

This past year more people than ever before have turned to growing their own vegetables. Now they look to the earth as more than something to walk on. The farmers who have raised their food are no longer taken for granted. They understand the disastrous effects of drought, winds, rains, or blights on growing fields.

The success of the grower often depends on the fact that plants require food and water just as much as human beings. Successful results give the grower fresh fruits and vegetables as well as many hours of pleasure from birds feeding on berry-bearing shrubs, enjoying the cool shade of trees, the winter loveliness of snow glistening on evergreens, or the glorious pageantry and lovely fragrance of flowers blooming from early spring to late fall.

B&B Balled and Burlapped.

TREES B&B (Balled and Burlapped)

Unless otherwise marked "B&B" (Balled and Burlapped), trees are dug bare rooted when dormant. Should balling and burlapping be desired on trees not marked "B&B," an extra charge will be made.

Heights given with caliper measurements are general average and are approximate only. Where no caliper is given, the height is the governing measurement.

After the regular bare-root digging season is passed, this material must be dug with a ball and, since considerable time, labor, and soil are involved, balling and burlapping will be charged.

Prices quoted on request.

Deciduous Shrubs

FOR FLOWERS, FOLIAGE, BERRIES

Any true lover of nature will find a world of joy and happiness watching the striking and fascinating changes in flowering shrubs throughout the season. They are a delight from the first mild spring day, when the buds begin to swell, until late in autumn, when the leaves are resplendent in their festive colors and brilliant berries.

We are only able here to acquaint the reader with a very small portion of this wealth of beauty. Generous planting of shrubs around the home will repay in beauty and pleasure many times over the small investment required.

SHRUBS B&B (Balled and Burlapped)

Unless otherwise marked "B&B" (Balled and Burlapped), shrubs are dug bare rooted when dormant. Should balling and burlapping be desired on shrubs not marked "B&B," an extra charge will be made at the following rates.

After the regular bare-root digging season is passed, this material must be dug with a ball, and since considerable time, labor, and soil are involved, balling and burlapping will be charged at these same rates.

Hardy Perennial and Rock Plants

Perennials include most of the finest flowering plants as well as the foundation material for practically every well planted garden. They exist in infinite variety, size, and color, and their period of bloom covers the entire season. A well chosen collection of perennials provides a great source of garden interest.

The material we offer is strong, field-grown stock with the exception of some varieties which transplant better from pots.

We strongly advise the purchase of perennials in quantities of 3 or more of one kind, since a group of 3 or more plants makes a much more striking and effective color mass in the garden. Please remember that 6 or more plants of one variety may be purchased at the dozen rate.

Note. — Figures after the description and blooming dates represent the approximate height reached by the perennials under favorable conditions.

***SUITABLE AS ROCK GARDENS, ALSO**

Hardy Garden Phlox

BLOOMS JULY, AUGUST, SEPTEMBER

The hardy perennial Phlox deserves a prominent place in all hardy flower borders, or where breaks of brilliant colors are required during July, August and September. For general border decoration, no other family is capable of producing such fine displays of dazzling color at a time when there is little else to depend on. Their large heads of bloom are excellent for cutting as well.

The immense size and perfect form of the new varieties will be a revelation to those who know only the old-fashioned kinds. We offer the good old and outstanding new varieties, all of which have been tried and tested for desirability and true-ness to name. Our collection is the result of careful selection over a period of many years and we confidently recommend it as consisting of the best available varieties.

CULTURE: Phlox will grow and bloom almost anywhere; however, they are gross feeders and if given rich soil and plenty of moisture, best results can be obtained. To grow Phlox really well, the soil should be well drained, deeply spaded, enriched with rotted manure or bonemeal, and well cultivated. Planting may be done in fall or spring in a sunny border. Set the plants 12 to 15 inches apart. Lift and divide every three or four years or they will become crowded, which results in poor, small flowers. Be sure to **REMOVE** all flower heads before they go to seed. Phlox require considerable **WATER** during the blooming period. **NEVER WATER OVERHEAD;** always keep blooms and foliage dry, letting hose run slowly on the ground. This method of watering prevents mildew.

Unless otherwise noted, all plants on this page are 35c. each; \$1.00 per 3 of one variety; \$3.50 per doz. of one variety. (Six or more plants of one variety at dozen rate.)

PHLOX—Continued

If mildew appears, indicated by a white powdery substance on the leaves during changeable weather, spray with sulphide of potassium, 1 ounce to 3 gallons of water, to which a little soap should be added, or apply a good brand of fine dusting sulphur in early June, using a duster to insure a coating **BENEATH** as well as above the foliage. Repeat every 2 weeks if needed.
